

# PRE-ELEC<sup>®</sup> PS 1324

PS extrusion compound  
Electrically conductive

Applications: Sheets  
Thermoformed trays

PRE-ELEC<sup>®</sup> PS 1324 is a carbon black filled conductive thermoplastic compound based on polystyrene. In addition to a low electrical resistivity It has an excellent balance of mechanical properties and is easy to extrude.

## Processing instructions

		Unit	Processing range	
Extrusion	Cylinder temperature profile	°C	180	- 220
	Die temperature profile	°C	200	- 220
	Tool/Roll temperature	°C	90	- 60

## Notes

Drying of the product is recommended for 2-3 hours at 80°C prior to use.

Processing conditions as with filled PS. These parameters are for guidance only. The process parameters should always be optimized for the used equipment. The instructions of the equipment manufacturer should be followed. Caution should be taken when handling molten material as it is extremely hot and may cause severe burns.

## Storage

Product-specific details are mentioned in the notes above. The general minimum shelf life for Premix's product is 3 years with the following conditions: 1) original package is unopened, 2) the storage area and conditions provide protection from direct sunlight and significant changes in storage temperature, 3) the product is pre-dried accordingly before use.
