PP extrusion compound Electrically conductive Typical end product Applications

PRE-ELEC® PP 1397 1397

> Corrugated board Sheets Profiles

PRE-ELEC® PP 1397 is electrically conductive thermoplastic compound based on polypropylene. The conductivity is achieved by using a special condutive carbon black. The product has excellent mechanical properties and is easy to extrude.

	Die temperature profile	°C	230 - 230
	Tool/Roll temperature	°C	90 - 60

Notes

Drying of the product is recommended for 2-3 hours at 80°C prior to use.

These parameters are for guidance only. The process parameters should always be optimized for the used equipment. The instructions of the equipment manufacturer should be followed. Caution should be taken when handling molten material as it is extremely hot and may cause severe burns.

<u>Storage</u>

Product-specific details are mentioned in the notes above. The general minimum shelf life for Premix's product is 3 years with the following conditions: 1) original package is unopened, 2) the storage area and conditions provide protection from direct sunlight and significant changes in storage temperature, 3) the product is pre-dried accordingly before use.
